MALE FERTILITY TESTS

The most complete and reliable
series of andrology tests

Male infertility has a solution

Male infertility is one of the most common yet so complex health issues that concern thousands of couples around the world. It is due to various causes, which are mostly attributed to the modern lifestyle. However, due to wrong social beliefs and stereotypes, male infertility has been associated with impotence, which acts as an inhibiting factor for men to seek the right medical advice and understand that male infertility has a solution!

At Diagnostiki Athinon, science is on your side. The specialized and accurate andrology tests we offer are the first step in identifying the problem and with the help of your doctor will allow you to live the unique experience of fatherhood.

With reliability, validity, and above all respect for each examinee, Diagnostiki Athinon gives you the answers you need!

Why choose us?

Diagnostiki Athinon provides you with an extensive series of laboratory tests for the investigation of male fertility, the SpermaScan®. It is the only laboratory in Greece that provides the most valid and specialized tests concerning sperm and one of the best-organized, independent, medical laboratories for the investigation of male infertility.

- 1 Laboratory completeness.** During semen analysis, certain findings may indicate the need for additional tests. At Diagnostiki Athinon, a modern medical laboratory, we have the ability to perform all the tests that may be required either on the patient's semen, urine or blood, in order to fully investigate the causes of male infertility.
- 2 Medical opinion.** The results are not just numbers and measurements. They represent a medical reality. The results are discussed and analyzed by the medical doctor to the patient, clarifying possible questions. In addition, the results are discussed with your attending physician, helping him/her, and actively participating, so the appropriate treatment intervention plan is created in time.

The special laboratory for the investigation of male fertility

3 The **procedures** of all semen tests are carried out according to the latest guidelines of the World Health Organization (WHO).

4 We work closely with research and university institutions in Greece and abroad, to be able to provide patients and health scientists who trust us with a very large number of **specialized and innovative laboratory tests** related to the investigation of male infertility.

5 Quality assurance in all processes. Diagnostiki Athinon has been operating for many years and is certified with the ISO 9001:2008 standard (now ISO 9001:2015) in addition to participating in standard external quality controls schemes, we participate in specialized quality controls schemes (RfB Germany) for semen analysis and other sperm tests.

6 Space: At Diagnostiki Athinon we have a special, discrete space for sampling, equipped with TV & WiFi for the comfort of the patient during the sampling procedure.
